STIC-Biotech/ChemLib 171422

From: Swope, Sheridan
Sent: Monday, November 14, 2005 1:20 PM
To: STIC-Biotech/ChemLib
Subject: 09/858,332

For 09/858,332, pls search:

SID 15 against the .rge & .rst databases only
collect the top 300 hits

SID 28 against the .rge & .rst databases only
collect the top 600 hits

Toby Port

Thanks!!

Sheridan Swope, Ph.D.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            An Arabidopsis full-length cDNA library was constructed essentially
            as reported previously (Seki et al., 1998, 2002).This clone is in a
            modified pBluescript vector.
            Please visit our web site (http://pfgweb.gsc.riken.jp and
            http://rarge.gsc.riken.jp) for further details.

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

          Sequence corresponds to the extreme 5' end of mTn-3xHA/lacZ (ending
          in TCAGACCCC) followed by native Saccharomyces cerevisiae genomic
          sequence immediately upstream; generated by single read using
          sequencing primer indicated above; enables determination of site of
          mTn-3xHA/lacZ insertion.
          Seq primer: GGCCTTCTTTCTTTGGAAGTAC
          Class: transposon-tagged.

            The sequence contained an oligo-dT track that was present in the
            oligonucleotide that was used to prime the synthesis of first
            strand cDNA and therefore this may represent a bonafide poly A
            tail. The sequence tag present in the cDNA between the NotI site
            and the oligo-dT track served to verify it as a clone from the
            normalized rat heart pool library cDNA Library Preparation: M.B.
            Soares Lab Clone distribution: clones will be available through

                     very young, developing, fully-opened flowers and flowers
                     in early transition into pods."
                     /clone_lib="Developing flower"
                     /note="Vector: Lambda Zap; cDNA was prepared from polyA+
                     enriched, pooled samples of equivalent  amounts of total
                     RNA from very young, developing, fully-opened flowers  and
                     flowers transitioning into pods. The cDNA was
                     directionally ligated  into the Uni-Zap XR vector
                     (Stratagene) and packaged using the Gigapack  III Gold
                     packaging extracts. Phagemids containing cDNA inserts were
                     in  vivo excised from the recombinant Uni-ZAP XR vector
                     using ExAssist helper  phage and the E. coli strain
                     XL1-Blue MRF' (Stratagene). Excised  plasmids were plated
                     using SOLR cells."

                     /note="Vector: pYX-Asc; Site_1: EcoR I; Site_2: Not I;
                     UI-R-GR0 is a cDNA library containing the following
                     tissue(s): rat whole embryo 13dpc. The library was
                     constructed according to Bonaldo, Lennon and Soares,
                     Genome Research, 6:791-806, 1996. Denatured RNA was size
                     fractionated on a 1% agarose gel. First strand cDNA
                     synthesis was primed with oligo-dT primer containing a Not
                     I site. Double strand cDNA was size selected according to
                     mRNA size fraction, ligated with EcoR I adaptor, digested
                     with NotI and then cloned directionally into pYX-Asc
                     vector. The library tag sequence located between the Not I
                     site and the polyA tail is CATCTCTACT. This library was
                     created for the University of Iowa Program for Rat Gene
                     Discovery and Mapping (Val Sheffield, Bento Soares and Tom
                     Casavant)."

            The sequence contained an oligo-dT track that was present in the
            oligonucleotide that was used to prime the synthesis of first
            strand cDNA and therefore this may represent a bonafide poly A
            tail. The sequence tag present in the cDNA between the NotI site
            and the oligo-dT track served to identify it as a clone from the
            non-normalized rat brain pool library cDNA Library Preparation:
            M.B. Soares Lab Clone distribution: clones will be available
            through Research Genetics (www.resgen.com) The following repetitive
            elements were found in this cDNA sequence: 504-556,
            >(CAA)n#Simple_repeat
            Seq primer: M13 Forward
            POLYA=Yes.

                     /clone_lib="NIA Mouse Neural Stem Cell (Differentiated)
                     cDNA Library (Long)"
                     /note="Vector: pSPORT1 (Invitrogen); Site_1: SalI; Site_2:
                     NotI; Mouse cDNA project by the Laboratory of Genetics,
                     National Institute on Aging (NIA), Intramural Research
                     Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is
                     a long-transcript enriched cDNA library (Ref. Genome Res.
                     11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were
                     obtained from Dr. Angelo L. Vescovi (Institute for Stem
                     Cell Research, Italy). Double-stranded cDNAs were
                     synthesized with an Oligo(dT) primer [Invitrogen:
                     5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCCTTTTTTTTTTTTTTT-3'] from
                     2.0 Microgram of total RNA, treated with T4 DNA
                     polymerase, and purified by ethanol-precipitation. The
                     cDNAs were ligated to Lone-linker LL-Sal4, purified by
                     phenol/chloroform, and separated from free linkers by
                     Centricon 100. Then, the cDNAs were amplified by
                     long-range high fidelity PCR using Ex Taq polymerase
                     (Takara) with a primer Sal4-S. The products were purified
                     by phenol/chloroform and Centricon 100. The cDNAs were
                     digested with SalI and NotI enzymes and cloned into
                     SalI/NotI site of pSPORT1 plasmid vector. The DH10B E.
                     coli host was transformed with the ligation mixture by the
                     standard chemical method. The average insert size is about
                     3.2 kb. The library was constructed by Yulan Piao."

                     /clone_lib="Roots minus potassium"
                     /note="Organ: Root; Vector: pSL1180; Site_1: EcoRI;
                     Site_2: XhoI; The library was prepared from polyA+ RNA
                     from the roots of 1-year-old loblolly pine (Pinus taeda)
                     cuttings that were rooted and then planted in washed sand.
                     The rooted cuttings were maintained for 117 days (July
                     2003 harvest) under ambient conditions in a local
                     greenhouse. They were kept on a weekly regimen of 0.5x
                     nutrient-complete Hoagland's solution and supplemented
                     with additional water sufficient to maintain a 15% soil
                     moisture content. For twenty-eight days (28 d) prior to
                     harvesting roots for mRNA preparation, the trees received
                     Hoagland's solution lacking potassium (K) to induce a
                     potassium-deficiency. Double-stranded cDNA was cloned
                     unidirectionally into pSL1180. Inserts can be excised with
                     EcoRI (5' end) and XhoI (3' end)."

                     FvI was prepared from growth on excised maize seedling
                     roots and shoots. The roots and shoots were prepared as
                     described above and then inoculated by dipping briefly in
                     a suspension of 5 x 10e6 conidia per ml. The inoculated
                     roots and shoots were then incubated on moistened Whatman
                     #1 filter paper at room temperature under sterile
                     conditions for 4 days. Fungal mycelial was collected,
                     frozen in liquid nitrogen, ground to a powder, and then
                     added to TRIzol Reagent (Invitrogen, Carlsbad CA) at
                     approximately 1 g mycelia per 10 ml TRIzol. The cDNA was
                     directionally ligated into the pBlueScript II SK(+) XR
                     vector (cDNA Synthesis Kit; Stratagene)."

                     /cultivar="Williams 82"
                     /db_xref="taxon:3847"
                     /clone="GENOME SYSTEMS CLONE ID: Gm-c1040-3861"
                     /tissue_type="Hypocotyl and Plumule, germinating seeds"
                     /lab_host="DH10B"
                     /clone_lib="Gm-c1040"
                     /note="Vector: pT7T3Pac (Pharmacia); Site_1: EcoRI;
                     Site_2: NotI; This cDNA library was constructed from mRNA
                     isolated from hypocotyl and plumule tissues of seeds
                     germinated for three days of the cultivar Williams 82.
                     Complementary DNA was synthesized from mRNA using a primer
                     consisting  of a poly(dT) sequence with a NotI restriction
                     site. EcoRI adapters were  ligated to the blunt-ended cDNA
                     fragments followed by digestions with EcoRI  and NotI. The
                     cDNA fragments were directionally cloned into the
                     EcoRI-NotI restriction site of the pT7T3-Pac vector. The
                     ligated cDNA fragments were transformed into DH10B host
                     cells (Gibco BRL). This library was constructed by Dr.
                     Randy Shoemaker."

/clone_lib="Hordeum vulgare seedling root EST library HVcDNA0007 (Etiolated and unstressed)"
/note="Vector: lambdaZAP; Site_1: EcoR1; Site_2: Xho1; Seeds were surface sterilized then germinated under axenic conditions in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedling roots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see http://www.genome.clemson.edu/projects/barley. To order this clone see http://www.genome.clemson.edu/orders Also see Close TJ, Wing R, Kleinhofs A, Wise R (2001) Genetically and physically anchored EST resources for barley genomics. /note="Vector: pBluescript SK plus; Site_1: EcoRI; Site_2: XhoI; Library was constructed by Debopam Chakrabarti. Total RNA samples were isolated from mixed stage saponin(0.1%)-lysed P. falciparum 3D7 infected erythrocytes by the acidic guanidinium-phenol chloroform method. The poly A+ RNA was isolated by the polyAT-Tract mRNA isolation system (Promega, WI) using streptavidin Magnesphere particles. Directional cDNA libraries were constructed by oligo d(T) priming of poly(A)+ RNA (5mg) into EcoRI and XhoI sites of l ZapII vector using the Zap cDNA synthesis kit (Stragene, CA). The average size of the cDNA inserts in the library was between 1.0 and 1.5kb. Clones were mass excised using the ExAssist helper phage (Stratagene), the phagemids were precitptated with PEG 8000 and extracted with phenol/chloroform. Phagemid DNA was electroporated into DH10B cells."

                     Plants were grown in the greenhouse at the University of
                     California, Riverside (Fenton, SJ Close, TJ Close). Whole
                     spike with awns trimmed were collected at white, green and
                     yellow anther stages (Fenton). Total RNA was prepared from
                     each pool, equal quantities of all three RNA pools were
                     combined, poly(A) RNA was purified from the mixture, one
                     primary unamplified cDNA library was made, and 1 million
                     pfu were in vivo excised to give pBluescript SK(-) cDNA
                     phagemids. These steps were performed in the TJ Close lab
                     (Choi) at the University of California, Riverside.
                     Phagemids were plated and picked at the Clemson University
                     Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins
                     and Wing) Plasmid DNA preparations, DNA sequencing and
                     sequence analysis were performed at CUGI (Wing, Yu,
                     Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence
                     has been trimmed to remove vector sequence and contains a
                     minimum of 100 bases of phred value 20 or above. For more
                     details on library preparation and sequence analysis see
                     http://www.genome.clemson.edu/projects/barley. To order
                     this clone see http://www.genome.clemson.edu/orders Also

                      /clone_lib="Gm-c1054"
                      /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2:
                      XhoI; The Harosoy NIL was constructed and seed was
                      provided by Dr. J. Specht, University of Nebraska
                      (Shoemaker and Specht, 1995). The cDNA library was
                      constructed from mRNA isolated from leaf tissue at various
                      developmental stages of 3 week old greenhouse grown
                      plants. Complementary DNA was  synthesized from mRNA using
                      a primer consisting of a poly(dT) sequence  with a XhoI
                      restriction site and a 3' anchor. EcoRI adapters were
                      ligated  to the blunt-ended cDNA fragments followed by
                      XhoI digestion. The cDNA  fragments were directionally
                      cloned into the EcoRI-XhoI restriction site of  the
                      pBluescript vector. The ligated cDNA fragments were
                      transformed into  DH10B host cells (GibcoBRL). This
                      library was constructed in cooperation  with Dr. Paul
                      Keim's laboratory at Northern Arizona University."

/note="Vector: pSPORT1; Site_1: NotI; Site_2: SalI; This cDNA library was constructed from mRNA isolated from very young seed coats (20-50mgs fresh weight) of greenhouse grown plants. The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a NotI restrictions site. SalI linkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORT1 vector. The library was transformed into E.coli ElectroMax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

/clone_lib="Gm-c1072"
/note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The cDNA library wms constructed from mRNA isolated from 2-3 week old seedlings that were induced for symptoms of SDS (Sudden Death Syndrome) disease by the translocation of culture filtrate of Fusarium solani f. sp. glycines (Plant Cell Report 18:375-380). Cultivar PI 567374 is partially resistant to the disease SDS. Plant tissue (expanded leaves, folded leaves, and new shoots) were collected at 1, 6, 24, and 48 hrs. after inoculation and their mRNA pooled equally for cDNA construction. The library was prepared using the Stratagene pBluescript II SK(+) library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with an XhoI restriction site. EcoRI adaptors were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA insert is protected from XhoI digestion via methylation during first strand synthesis. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DH10B host cells. Plants were inoculated by Shuxian Li (Glen Hartman lab, University of Illinois). Library was constructed by Steve Clough (Lila Vodkin lab, University of Illinois)."

                     Plants were grown in the greenhouse at the University of
                     California, Riverside (Fenton, SJ Close, TJ Close). Whole
                     spikes with awns trimmed were collected at 5, 10, 15, 20,
                     30 and 45 DAP (Fenton). Total RNA was prepared from each
                     pool, equal quantities of all six RNA pools were combined,
                     poly(A) RNA was purified from the mixture, one primary
                     unamplified cDNA library was made, and 1 million pfu were
                     in vivo excised to give pBluescript SK(-) cDNA phagemids
                     (Choi)in the TJ Close lab at the University of California,
                     Riverside. Phagemids were plated and picked at the Clemson
                     University Genomics Institute (CUGI) (Begum, Palmer,
                     Frisch, Atkins and Wing). Plasmid DNA preparations, DNA
```

sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see http://www.genome.clemson.edu/projects/barley. To order this clone see http://www.genome.clemson.edu/orders Also see Close TJ, Wing R, Kleinhofs A, Wise R (2001) Genetically and physically anchored EST resources for barley genomics.                      cDNA library - UCRCP01"
                     /note="Vector: Lambda Uni-ZAP XR, excised phagemid;
                     Site_1: EcoRI; Site_2: XhoI; Twelve seedlings were
                     transplanted from cones to 4 inch pots of sand mix, then
                     grown in greenhouses (Darsow, Becker lab). Citrus
                     nematodes (Tylenchulus semipenitrans) were extracted from
                     contaminated soil from the UC Riverside Citrus Research
                     Center then suspended in water and added to pots (Darsow).
                     Growing roots were collected by clipping them away from
                     the old root ball 24 hr and 4 days after inoculation
                     (Federici). Total RNA was extracted using Concert Plant
                     RNA Reagent (Invitrogen)followed by RNeasy (Qiagen), an
                     equal amount of RNA was pooled from each of the two
                     collection times, poly(A) RNA was purified using Oligotex
                     (Qiagen), a cDNA library was made using a cDNA synthesis
                     kit (Stratagene), then 0.45 million primary lambda cDNA
                     clones were in vivo excised to give a population of
                     pBluescript SK(-) phagemids (Fenton, Close lab). Phagemids
                     were plated, plasmid DNA purified, cDNA clones archived,
                     and DNA sequences determined bi-directionally using an
                     ABI3730 at the University of California Riverside
                     Institute of Integrative Genome Biology Genomics Core
                     Instrumentation Facility, (Choi, Kingan). Chromatogram
                     files were downloaded by FTP by Close, then processed by
                     Wanamaker (Close lab) using the HarvEST pipeline
                     (http://harvest.ucr.edu) to remove vector and cloning
                     oligo sequences and various contaminants, and to trim to a
                     high quality region. Sequences that retained a phred 17
                     region of at least 100 bases were assembled, then chimeras
                     were removed following manual inspection of assemblies
                     (Close, Roose, Wanamaker). Sequences that survived all
                     removal steps were submitted to GenBank."

/note="Vector: Lambda Uni-ZAP XR, excised phagemid; Site_1: EcoRI; Site_2: XhoI; Twelve seedlings were transplanted from cones to 4 inch pots of sand mix, then grown in greenhouses (Darsow, Becker lab). Citrus nematodes (Tylenchulus semipenitrans) were extracted from contaminated soil from the UC Riverside Citrus Research Center then suspended in water and added to pots (Darsow). Growing roots were collected by clipping them away from the old root ball 24 hr and 4 days after inoculation (Federici). Total RNA was extracted using Concert Plant RNA Reagent (Invitrogen) followed by RNeasy (Qiagen), an equal amount of RNA was pooled from each of the two collection times, poly(A) RNA was purified using Oligotex (Qiagen), a cDNA library was made using a cDNA synthesis kit (Stratagene), then 0.45 million primary lambda cDNA clones were in vivo excised to give a population of pBluescript SK(-) phagemids (Fenton, Close lab). Phagemids were plated, plasmid DNA purified, cDNA clones archived, and DNA sequences determined bi-directionally using an ABI3730 at the University of California Riverside Institute of Integrative Genome Biology Genomics Core Instrumentation Facility, (Choi, Kingan). Chromatogram files were downloaded by FTP by Close, then processed by Wanamaker (Close lab) using the HarvEST pipeline (http://harvest.ucr.edu) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a phred 17 region of at least 100 bases were assembled, then chimeras were removed following manual inspection of assemblies (Close, Roose, Wanamaker). Sequences that survived all removal steps were submitted to GenBank."

            An Arabidopsis full-length cDNA library was constructed essentially
            as reported previously (Seki et al., 1998). cDNA cleaved with BamHI
            and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et
            al., submitted for publication) digested with BamHI and SalI. This
            clone is in a modified pBluescript vector. Please visit our web
            site (http://www.gsc.riken.go.jp/e/plant/index _e.html) for further
            details.

COMMENT     This STS is part of a random genomic sequencing program of thirteen
            yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
            exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
            Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
            lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
            angusta, Debaryomyces hansenii var.  hansenii, Pichia sorbitophila,
            Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
            5 kb were prepared and both extremities were sequenced. See
            keywords for description of this sequence and for the sequence of
            the other extremity of this insert.

            Stanford University, 855 California Avenue, Palo Alto, CA 94304,
            USA
COMMENT     e-mail for correspondence: arab@sequence.stanford.edu

            RIKEN Genomic Sciences Center (GSC) members carried out the
            collection and clustering of RAFL cDNAs (RAFL cDNA : 'RIKEN
            Arabidopsis  Full-Length cDNA'): Seki,M., Narusaka,M., Ishida,J.,
            Satou,M., Kamiya,A., Sakurai,T., Carninci,P., Kawai,J.,
            Hayashizaki,Y. and Shinozaki,K.

            The Salk, Stanford, PGEC (SSP) Consortium members carried out the
            sequencing and annotation of the RAFL cDNAs: Nguyen,M.,
            Southwick,A., Karlin-Neumann,G.,  Lam,B., Miranda,M., Palm,C.J.,
            Bowser,L., Jones,T., Banh,J., Chen,H., Cheuk,R., Chung,M.K.,
            Kim,C., Lin,J., Liu,S.X., Pham,P.K., Sakano,H., Shinn,P.,
            Yamada,K., Ecker,J., Theologis,A. and Davis,R.W.

            Nguyen,M, (SSP/Stanford) and Seki,M. (RIKEN GSC) contributed
            equally to this work.  Shinozaki,K. (RIKEN GSC) and Davis,R.W.
            (SSP/Stanford)  contributed equally to this work as PIs.

            R. M.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 182 Row: h Column: 17
            This clone was selected for full length sequencing because it
            passed the following selection criteria: Similarity but not
            identity to protein.

AF309805
LOCUS       AF309805               32083 bp    DNA     linear   PLN 14-MAR-2001
DEFINITION  Pneumocystis carinii f. sp. carinii glutathione synthetase Gsh1
            (gsh1) gene, partial cds; putative a-factor pheromone receptor Ste3
            (ste3) gene, complete cds, alternatively spliced; and Ydr124wp-like
            protein, helix-loop-helix DNA binding protein, Yer049wp-like
            protein, protein kinase Ste20 (ste20), putative sucrose carrier
            Sca1 (sca1), putative Na+/H+ exchanger Nhx1 (nhx1), putative 26S
            protease regulatory subunit 4 (mts2), hypothetical protein, glycyl
            tRNA synthetase, and coiled-coil protein genes, complete cds.

  TITLE     Direct Submission
  JOURNAL   Submitted (26-FEB-2002) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L21360
                Center clone name: 195_K_9
            --------------.
            * NOTE: This record contains 81 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      674: contig of 674 bp in length
            *      675      774: gap of 100 bp
            *      775     1480: contig of 706 bp in length
            *     1481     1580: gap of 100 bp
            *     1581     2302: contig of 722 bp in length

            -------------- Project Information
                Center project name: L29419
                Center clone name: 680_F_15
            --------------.
            * NOTE: This record contains 89 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      806: contig of 806 bp in length
            *      807      906: gap of 100 bp

COMMENT     * NOTE: This is a 'working draft' sequence. It currently
            * consists of 29 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1834: contig of 1834 bp in length
            *     1835     1934: gap of unknown length
            *     1935     2876: contig of 942 bp in length
            *     2877     2976: gap of unknown length
            *     2977     4001: contig of 1025 bp in length
            *     4002     4101: gap of unknown length
            *     4102     5069: contig of 968 bp in length
            *     5070     5169: gap of unknown length
            *     5170     6230: contig of 1061 bp in length
            *     6231     6330: gap of unknown length
            *     6331     7480: contig of 1150 bp in length

COMMENT     The nucleotide sequence of this BAC clone was generated by
            combining Monsanto and RGP-Japan sequencing data.
            NOTE: It currently consists of 1 contigs. Gaps between the contigs
            are represented as runs of N. The order of the pieces is believed
            to be correct as given, however the sizes of the gaps between them
            are based on estimates that have provided by the submitter. This
            sequence will be replaced by the finished sequence as soon as it is
            available and the accession number will be preserved.
            * NOTE: This is a 'working draft' sequence.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.

AUTHORS Sasaki,T., Matsumoto,T. and Katayose,Y.
TITLE Oryza sativa nipponbare(GA3) genomic DNA, chromosome 8, BAC clone:B1147B12
JOURNAL Published Only in Database (2002)
REFERENCE 2 (bases 1 to 127902)
AUTHORS Sasaki,T., Matsumoto,T. and Katayose,Y.
TITLE Direct Submission
JOURNAL Submitted (12-JUN-2002) Takuji Sasaki, National Institute of Agrobiological Sciences, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan (E-mail:tsasaki@nias.affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/, Tel:81-298-38-7441, Fax:81-298-38-7468)
COMMENT On Dec 2, 2003 this sequence version replaced gi:33468826.
Genes were predicted from the integrated results of the following: GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH (http://www.softberry.com/), GeneMark.hmm (http://opal.biology.gatech.edu/GeneMark/), GlimmerM (http://www.tigr.org/tdb/glimmerm/glmr_form.html), RiceHMM (http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor (http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), sim4 (http://globin.cse.psu.edu/html/docs/sim4.html), gap2 (http://www.tigr.org/software/glimmerm/), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no.
A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.
The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of B1147B12 clone has an overlap with P0015C07 (DDBJ: AP004654) clone at 3' end. Detailed information on overlap

```
          and assembly quality together with annotation of this entry is
          available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.

COMMENT     On Jan 29, 2004 this sequence version replaced gi:35761513.
            ------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            -------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEY-261A10
            is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5.

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: KELQ
                Center clone name: CH230-469L20
            -------------- Summary Statistics
                Sequencing vector: Plasmid;
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 135022 bases at least Q40
                Consensus quality: 140150 bases at least Q30
                Consensus quality: 144654 bases at least Q20
                Estimated insert size: 142503; sum-of-contigs estimation
                Quality coverage: 3x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 41 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

LOCUS       AL355315              157193 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-548K23 on chromosome 10 Contains
            the ANKRD2 gene for ankyrin repeat domain 2 (stretch responsive
            muscle), six novel genes, the gene for phosphatidylinositol
            4-kinase type II (PI4KII) and four CpG islands, complete sequence.
ACCESSION   AL355315
VERSION     AL355315.18  GI:16972857
KEYWORDS    HTG; ANKRD2; ankyrin; CpG island; PI4KII.

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:23194554.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GTNJ
                Center clone name: CH230-234D18
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 153621 bases at least Q40
                Consensus quality: 154381 bases at least Q30
                Consensus quality: 154930 bases at least Q20
                Estimated insert size: 156926; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   157709: contig of 157709 bp in length
            *   157710   157809: gap of unknown length
            *   157810   161701: contig of 3892 bp in length.

            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
```

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (http://www.chori.org) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone. This clone is overlapped by AC144794 and AC120797.

            -------------- Summary Statistics
                Center project name: M_BB0170P09
            Drafting center: WIBR

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e. phred quality
            >=30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
```

one plasmid subclone, fosmid clone or direct clone walk sequence. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to obtain the consensus sequence. The assembly was confirmed by restriction digest.
This finishing standard has slightly changed from the previous Human standard. Specifically, standards for regions of low sequence complexity (such as dinucleotide repeats and small unit tandem repeats) have been relaxed. These regions are very prevalent in the mouse genome, and the return on extended finishing efforts is minimal.
If a sequence meets the criteria of the above statement, it needs no comments or tags. If the criteria are not met, such as ambiguous bases, then the region is duly annotated.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:
The BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org

This sequence is the entire insert of the clone.

              Contact: sequence_submissions@genome.wi.mit.edu
          -------------- Project Information
              Center project name: L8119
              Center clone name: 303_C_4
          -------------- Summary Statistics
              Sequencing vector: M13; M77815; 100% of reads
              Chemistry: Dye-terminator Big Dye; 100% of reads
              Assembly program: Phrap; version 0.960731
              Consensus quality: 165466 bases at least Q40
              Consensus quality: 171544 bases at least Q30
              Consensus quality: 173762 bases at least Q20
              Insert size: 182000; agarose-fp
              Insert size: 174933; sum-of-contigs
              Quality coverage: 4.3 in Q20 bases; agarose-fp
              Quality coverage: 4.5 in Q20 bases; sum-of-contigs
          --------------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 19 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1     1180: contig of 1180 bp in length
          *     1181     1280: gap of 100 bp
          *     1281     2705: contig of 1425 bp in length
          *     2706     2805: gap of 100 bp
          *     2806     4387: contig of 1582 bp in length
          *     4388     4487: gap of 100 bp
          *     4488     6165: contig of 1678 bp in length
          *     6166     6265: gap of 100 bp
          *     6266    10875: contig of 4610 bp in length
          *    10876    10975: gap of 100 bp
          *    10976    17071: contig of 6096 bp in length
          *    17072    17171: gap of 100 bp

                Center project name: M_BA0188P12
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
            and Minako Tateno in the laboratory of Pieter de Jong
            (http://www.chori.org) from female C57BL/6J mouse kidney and/or
            brain genomic DNA.  The clone and detailed information can be
            obtained from Research Genetics, Inc. (http://www.resgen.com) or
            Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone.

  JOURNAL   Submitted (27-FEB-2002) DOE Joint Genome Institute, 2800 Mitchell
            Drive, Walnut Creek, CA 94598, USA
COMMENT     On Feb 26, 2002 this sequence version replaced gi:8576061.
            Draft Sequence Produced by DOE Joint Genome Institute
            www.jgi.doe.gov
            Finishing Completed at Stanford Human Genome Center
            www-shgc.stanford.edu
            Quality: Phrap Quality >=40 100% of Sequence;
            Estimated Total Number of Errors is 0.
            NOTE:  BACTERIAL TRANSPOSON excised at 162460
            NOTE:  This insert is not the entire sequence of the clone (entire
            sequence is 195.7kb). It is clipped at the overlap with AC034243.
            The number of bases overlapped is 32318.

            -------------- Summary Statistics
                Center project name: M_BB0188M09
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone, fosmid clone or direct clone walk sequence.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to obtain the consensus sequence; and
            the assembly was confirmed by  restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-24 BAC Library has been constructed by Pieter de Jong and
            coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
            and/or brain genomic DNA. The clone and detailed information can be
            obtained from Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone. This clone is
            overlapped by AC122826.

                Center project name: M_BB0400M10
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone, fosmid clone or direct clone walk sequence.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to obtain the consensus sequence; and
            the assembly was confirmed by  restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-24 BAC Library has been constructed by Pieter de Jong and
            coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
            and/or brain genomic DNA. The clone and detailed information can be
            obtained from Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone. This clone is
            overlapped by AC132110.

            -------------- Summary Statistics
                Center project name: M_BA0274J16

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e. phred quality
            >=30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone, fosmid clone or direct clone walk sequence.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to obtain the consensus sequence. The
            assembly was confirmed by restriction digest.
            This finishing standard has slightly changed from the previous
            Human standard. Specifically, standards for regions of low sequence
            complexity (such as dinucleotide repeats and small unit tandem
            repeats) have been relaxed. These regions are very prevalent in the
            mouse genome, and the return on extended finishing efforts is
            minimal.
            If a sequence meets the criteria of the above statement, it needs
            no comments or tags. If the criteria are not met, such as ambiguous
            bases, then the region is duly annotated.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The  BAC Library has been constructed by Kazutoyo Osegawa and
            Minako Tateno in the laboratory of Pieter de Jong
            (http://www.chori.org) from female C57BL/6J mouse kidney and/or
            brain genomic DNA.  The clone and detailed information can be
            obtained from Research Genetics, Inc. (http://www.resgen.com) or
            Pieter de Jong and coworkers at http://www.chori.org

            This sequence is the entire insert of the clone.

COMMENT     On Jun 1, 2005 this sequence version replaced gi:62000937.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: M_BA0150H14
            Drafting center: WIBR

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e. phred quality
            >=30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone, fosmid clone or direct clone walk sequence.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to obtain the consensus sequence. The
            assembly was confirmed by restriction digest.
            This finishing standard has slightly changed from the previous
            Human standard. Specifically, standards for regions of low sequence
            complexity (such as dinucleotide repeats and small unit tandem
            repeats) have been relaxed. These regions are very prevalent in the
            mouse genome, and the return on extended finishing efforts is
            minimal.
            If a sequence meets the criteria of the above statement, it needs
            no comments or tags. If the criteria are not met, such as ambiguous
            bases, then the region is duly annotated.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The  BAC Library has been constructed by Kazutoyo Osegawa and
            Minako Tateno in the laboratory of Pieter de Jong
            (http://www.chori.org) from female C57BL/6J mouse kidney and/or
            brain genomic DNA.  The clone and detailed information can be
            obtained from Research Genetics, Inc. (http://www.resgen.com) or
            Pieter de Jong and coworkers at http://www.chori.org

            This sequence is the entire insert of the clone.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAR-2000) MIPS, at the Max-Planck-Institut fuer
            Biochemie, Am Klopferspitz 18a, D-82152 Martinsried, FRG, E-mail:
            lemcke@mips.biochem.mpg.de,mayer@mips.biochem.mpg.de Project
            Coordinator: Mike Bevan, Molecular Genetics Department, Cambridge
            Laboratory, John Innes Centre, Colney Lane, NR4 7UJ Norwich, UK,
            E-mail: michael.bevan@bbsrc.ac.uk
COMMENT     Information on performance of analysis and a more detailed
            annotation of this entry and other sequences of chromosomes 3, 4
            and 5 can be viewed at: http://www.mips.biochem.mpg.de/proj/thal/
            this fragment has an overlap with ATCHRIV55 at the 5' end and an
            overlap with ATCHRIV57 at the 3' end.

            -------------- Summary Statistics
                Center project name: M_BB0263I14
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-24 BAC Library has been constructed by Pieter de Jong and
            coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
            and/or brain genomic DNA. The clone and detailed information can be
            obtained from Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone.

LOCUS       BX897729              201932 bp    DNA     linear   VRT 17-APR-2005
DEFINITION  Zebrafish DNA sequence from clone DKEY-240A12 in linkage group 4
            Contains the gene for a novel protein similar to vertebrate
            neuronal cell adhesion molecule (NRCAM), the gene for a novel
            similar to contactin 1 (cntn1) and the 5' end of a novel gene,
            complete sequence.
ACCESSION   BX897729
VERSION     BX897729.6  GI:49614058

            --------------
```

```
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            DKEY-240A12 is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            Any regions longer than 1kb tagged as misc-feature 'unsure' are
            part of a tandem repeat of more than 10kb in length where it has
            not been possible to anchor the base differences between repeat
            copies.  The region has been built up based on the repeat element
            to match the total size of repeat indicated by restriction digest,
            but repeat copies may not be in the correct order and the usual
            finishing criteria may not apply.

            Center: Washington University Genome Sequencing Center
            Center code: WUGSC
            Web site:http://genome.wustl.edu/gsc/index.shtml
            -------------- Project Information --------------
            Center project name: H_NH0798G07
            -------------- Summary Statistics  --------------
            Sequencing vector: M13; 100%
            Sequencing vector: plasmid; 0%
            Chemistry: Dye-primer ET; 100% of reads
            Chemistry: Dye-terminator Big Dye; 0% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 191694 bases at least Q40
            Consensus quality: 196032 bases at least Q30
            Consensus quality: 198164 bases at least Q20
            Insert size: 229000; agarose-fp
            Insert size: 202940; sum-of-contigs
            Quality coverage: 4.53 in Q20 bases; agarose-fp
            Quality coverage: 5.19 in Q20 bases; sum-of-contigs
            ----------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 21 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *         1     1986: contig of 1986 bp in length
            *      1987     2086: gap of unknown length
            *      2087     3198: contig of 1112 bp in length

            Quality coverage:  3.06 in Q20 bases; agarose-fp estimation
            Quality coverage:  3.72 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 34 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1077: contig of 1077 bp in length
            *     1078     1177: gap of unknown length
            *     1178     2615: contig of 1438 bp in length

            Consensus quality: 217616 bases at least Q20
            Estimated insert size: 216000; agarose-fp estimation
            Estimated insert size: 224113; sum-of-contigs estimation
            Quality coverage:  9.65 in Q20 bases; agarose-fp estimation
            Quality coverage:  9.3 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 20 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1157: contig of 1157 bp in length
            *     1158     1257: gap of unknown length

  TITLE     Direct Submission
  JOURNAL   Submitted (20-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 20, 2002 this sequence version replaced gi:23096694.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: KAPR
                Center clone name: CH230-182C23
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 189235 bases at least Q40
                Consensus quality: 193444 bases at least Q30
                Consensus quality: 195848 bases at least Q20
                Estimated insert size: 190572; sum-of-contigs estimation
                Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    50224: contig of 50224 bp in length
            *    50225    50324: gap of unknown length
            *    50325    53089: contig of 2765 bp in length
            *    53090    53189: gap of unknown length
            *    53190   128906: contig of 75717 bp in length
            *   128907   129006: gap of unknown length
            *   129007   220174: contig of 91168 bp in length
            *   220175   220274: gap of unknown length
            *   220275   221473: contig of 1199 bp in length
            *   221474   221573: gap of unknown length
            *   221574   223286: contig of 1713 bp in length

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
```

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 13, 2002 this sequence version replaced gi:23683156.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:23194579.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24819332.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24956660.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:23265140.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            ---------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            ---------- Project Information
                Center project name: GLBJ
                Center clone name: CH230-201G13
            ---------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 229749 bases at least Q40
                Consensus quality: 231863 bases at least Q30
                Consensus quality: 233224 bases at least Q20
                Estimated insert size: 241516; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            ----------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   240773: contig of 240773 bp in length.

COMMENT     * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    53217: contig of 53217 bp in length
            *    53218    53317: gap of 100 bp
            *    53318    61652: contig of 8335 bp in length
            *    61653    61752: gap of 100 bp
            *    61753   123635: contig of 61883 bp in length
            *   123636   123735: gap of 100 bp
            *   123736   243772: contig of 120037 bp in length.

TITLE Direct Submission

JOURNAL Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT On May 9, 2003 this sequence version replaced gi:24818812.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:24818257.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

COMMENT     On May 9, 2003 this sequence version replaced gi:24941150.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

TITLE Direct Submission
JOURNAL Submitted (08-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Sep 14, 2002 this sequence version replaced gi:21737498.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:23268949.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
```

```
          by sized gaps filled with Ns to the estimated size. The sequence
          may extend beyond the ends of the clone and there may be sequence
          contigs within a contig-scaffold that consist entirely of whole
          genome shotgun sequence reads. Both end sequences and whole genome
          shotgun sequence only contigs will be indicated in the feature
          table.
          -------------- Genome Center
              Center: Baylor College of Medicine
              Center code: BCM
              Web site: http://www.hgsc.bcm.tmc.edu/
              Contact: hgsc-help@bcm.tmc.edu
          -------------- Project Information
              Center project name: GKLD
              Center clone name: CH230-3003
          -------------- Summary Statistics
              Assembly program: Atlas 3.0;
              Consensus quality: 222948 bases at least Q40
              Consensus quality: 227438 bases at least Q30
              Consensus quality: 230894 bases at least Q20
              Estimated insert size: 241816; sum-of-contigs estimation
              Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
          --------------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 4 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1    10694: contig of 10694 bp in length
          *    10695    10794: gap of unknown length
          *    10795   254141: contig of 243347 bp in length
          *   254142   254241: gap of unknown length
          *   254242   255436: contig of 1195 bp in length
          *   255437   255536: gap of unknown length
          *   255537   256717: contig of 1181 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:25188897.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

JOURNAL Submitted (22-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Sep 22, 2002 this sequence version replaced gi:21746538.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

TITLE Direct Submission
JOURNAL Submitted (22-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Sep 18, 2002 this sequence version replaced gi:22758689.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 192222 bases at least Q40
Consensus quality: 197138 bases at least Q30
Consensus quality: 200012 bases at least Q20
Estimated insert size: 220655; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 51246: contig of 51246 bp in length
* 51247 51346: gap of unknown length
* 51347 254883: contig of 203537 bp in length
* 254884 254983: gap of unknown length
* 254984 256476: contig of 1493 bp in length
* 256477 256576: gap of unknown length
* 256577 259335: contig of 2759 bp in length
* 259336 259435: gap of unknown length
* 259436 262405: contig of 2970 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (12-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Oct 12, 2002 this sequence version replaced gi:21908060.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 68 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    24290: contig of 24290 bp in length
            *    24291    24390: gap of 100 bp
            *    24391    25057: contig of 667 bp in length
            *    25058    25157: gap of 100 bp
            *    25158    25809: contig of 652 bp in length
            *    25810    25909: gap of 100 bp
            *    25910    26753: contig of 844 bp in length
            *    26754    26853: gap of 100 bp
            *    26854    27553: contig of 700 bp in length
            *    27554    27653: gap of 100 bp
            *    27654    29159: contig of 1506 bp in length

            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:23112649.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
```

in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Project Information
Center project name: GKJA
Center clone name: CH230-25D4
---------- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 237706 bases at least Q40
Consensus quality: 240031 bases at least Q30
Consensus quality: 241569 bases at least Q20
Estimated insert size: 243784; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
---
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 6 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 10150: contig of 10150 bp in length
* 10151 10250: gap of unknown length
* 10251 13830: contig of 3580 bp in length
* 13831 13930: gap of unknown length
* 13931 266092: contig of 252162 bp in length
* 266093 266192: gap of unknown length
* 266193 267411: contig of 1219 bp in length
* 267412 267511: gap of unknown length
* 267512 268555: contig of 1044 bp in length
* 268556 268655: gap of unknown length
* 268656 269740: contig of 1085 bp in length.

COMMENT     On May 13, 2003 this sequence version replaced gi:24819222.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (08-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 14, 2002 this sequence version replaced gi:21745587.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GSUI
                Center clone name: CH230-152P11
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 200619 bases at least Q40
                Consensus quality: 203437 bases at least Q30
                Consensus quality: 205038 bases at least Q20
                Estimated insert size: 218032; sum-of-contigs estimation
                Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   262593: contig of 262593 bp in length
            *  262594   262693: gap of unknown length
            *  262694   264394: contig of 1701 bp in length
            *  264395   264494: gap of unknown length
            *  264495   274368: contig of 9874 bp in length.

TITLE Direct Submission
JOURNAL Submitted (10-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Sep 10, 2002 this sequence version replaced gi:22759261.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Project Information
Center project name: GBIN
Center clone name: CH230-4C9
---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 216918 bases at least Q40
Consensus quality: 220868 bases at least Q30
Consensus quality: 223082 bases at least Q20
Estimated insert size: 227119; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 249362: contig of 249362 bp in length
* 249363 249462: gap of unknown length
* 249463 283417: contig of 33955 bp in length
* 283418 283517: gap of unknown length
* 283518 284542: contig of 1025 bp in length
* 284543 284642: gap of unknown length
* 284643 286094: contig of 1452 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:23269031.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (20-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 20, 2002 this sequence version replaced gi:23269633.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GWWM
                Center clone name: CH230-21G15
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 210290 bases at least Q40
                Consensus quality: 214669 bases at least Q30
                Consensus quality: 217523 bases at least Q20
                Estimated insert size: 216345; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    17319: contig of 17319 bp in length

                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L28022
                Center clone name: 423_F_3
            --------------.
            * NOTE: This record contains 86 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      713: contig of 713 bp in length
            *      714      813: gap of 100 bp

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1    99799: contig of 99799 bp in length
            *   99800    99899: gap of unknown length
            *   99900   164631: contig of 64732 bp in length.

COMMENT     On Jul 16, 2004 this sequence version replaced gi:32441371.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: M_BB0175H08
            --------------.

            NOTICE:
                This sequence was finished as follows unless otherwise noted:
                all regions were double stranded, sequenced with an alternate
                chemistry, or covered by high quality data (i.e., phred quality >=
                30); an attempt was made to resolve all sequencing problems, such
                as compressions and repeats; all regions were covered by sequence
                from more than one subclone; and the assembly was confirmed by
                restriction digest.

                MAPPING INFORMATION:
                Mapping information for this clone was provided by Dr. Wes Warren,
                Department of Genetics, Washington University, St. Louis MO. For
                additional information about the map position of this sequence, see
                http://genome.wustl.edu

                SOURCE INFORMATION:
                The RPCI-24 BAC Library has been constructed by Pieter de Jong and
                coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
                and/or brain genomic DNA. The clone and detailed information can be
                obtained from Pieter de Jong and coworkers at http://www.chori.org

                NEIGHBORING SEQUENCE INFORMATION:
                This sequence is the entire insert of the clone. This clone is
                overlapped by AC147229.

            -------------- Summary Statistics
                Center project name: M_BB0126E01
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-24 BAC Library has been constructed by Pieter de Jong and
            coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
            and/or brain genomic DNA. The clone and detailed information can be
            obtained from Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone.

TITLE Direct Submission
JOURNAL Submitted (11-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Oct 10, 2002 this sequence version replaced gi:21743892.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

DEFINITION  S.cerevisiae G1618 gene and MPT5/HTR1 gene.
ACCESSION   X83690
VERSION     X83690.1  GI:794143
KEYWORDS    G1618 gene; HTR1 gene; MPT5 gene; mutation suppressor; ser/thr
            protein kinase; upstream activation sequence.
SOURCE      Saccharomyces cerevisiae (baker's yeast)
  ORGANISM  Saccharomyces cerevisiae
            Eukaryota; Fungi; Ascomycota; Saccharomycotina; Saccharomycetes;
            Saccharomycetales; Saccharomycetaceae; Saccharomyces.
REFERENCE   1
  AUTHORS   Coglievina,M., Bertani,I., Klima,R., Zaccaria,P. and Bruschi,C.V.
  TITLE     The DNA sequence of a 7941 bp fragment of the left arm of
            chromosome VII of Saccharomyces cerevisiae contains four open
            reading frames including the multicopy suppressor gene of the pop2
            mutation and a putative serine/threonine protein kinase gene
  JOURNAL   Yeast 11 (8), 767-774 (1995)

  TITLE     Direct Submission
  JOURNAL   Submitted (26-JUN-2002) MIPS, Institut fuer Bioinformatik,
            GSF-Forschungszentrum fuer Umwelt und Gesundheit, GmbH,
            Ingolstaedter Landstrasse 1, D-85764 Neuherberg, FRG, E-mail:
            G.Mannhaupt@gsf.de Project Coordinator: Ulrich Schulte, Institute
            of Biochemistry, Heinrich-Heine-University, D-40225 Duesseldorf,
            E-mail: ulrich-schulte@uni-duesseldorf.de
COMMENT     this contig is an assembly of BAC clones 13H18 from 1 to: 65723,
            9O3 from 65724 to: 92584 (strain OR74A) and cosmid 108G5 from 92584
            to: 122576 rev, cosmid library pLORIST6Xh, strain 74-OR-23-1A; BAC
            and cosmid clones are available at the Fungal Genetic Stock Center,
            http://www.fgsc.net
            Sequencing was performed by MWG Biotech AG, Ebersberg, Germany,
            http://www.mwgdna.com
            Information on performance of analysis and a more detailed
            annotation of this entry and other sequences of linkage groups II
            and V can be viewed at: http://mips.gsf.de/proj/neurospora.

  TITLE     Genomic sequence for Oryza sativa, Nipponbare strain, clone
            OJ1057D12, from chromosome 3, complete sequence
  JOURNAL   Unpublished
REFERENCE   2  (bases 1 to 161676)
  AUTHORS   McCombie,W.R.
  TITLE     Direct Submission
  JOURNAL   Submitted (24-OCT-2002) Lita Annenberg Hazen Genome Center, Cold
            Spring Harbor Laboratories, 1, Bungtown Road, Cold Spring Harbor,
            NY 11724, USA
COMMENT     This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest.  The nucleotide
            sequence of this BAC clone was generated by combining Monsanto,
            Syngenta and Cold Spring Harbor Laboratory Genome Center sequencing
            data.
            Clone OJ1057D12 overlaps clone OSJNBa0048D11 (AC107619) from base
            129099 to base 161676.  The overlap is from base 126362 to base
            158911 (complemented) on OSJNBa0048D11.

  TITLE     Direct Submission
  JOURNAL   Submitted (12-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Oct 12, 2002 this sequence version replaced gi:21903154.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GWIQ
                Center clone name: CH230-229B19
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 229451 bases at least Q40
                Consensus quality: 231760 bases at least Q30
                Consensus quality: 233324 bases at least Q20
                Estimated insert size: 237494; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
```

```
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   249236: contig of 249236 bp in length.

            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            -------------- Project Information
                Center project name: GGNO
                Center clone name: CH230-21G7
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 240542 bases at least Q40
                Consensus quality: 242651 bases at least Q30
                Consensus quality: 244405 bases at least Q20
                Estimated insert size: 250228; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   250665: contig of 250665 bp in length
            *  250666   250765: gap of unknown length
            *  250766   251914: contig of 1149 bp in length
            *  251915   252014: gap of unknown length
            *  252015   254123: contig of 2109 bp in length.

Center project name: L29179
Center clone name: 1022_D_1
----------.
* NOTE: This record contains 88 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

COMMENT     On Nov 26, 2003 this sequence version replaced gi:34013548.
            The sequence of the clone was established as a mapping and
            sequencing  collaboration at the Stanford Genome Evolution Center,
            funded by the NIH Centers of Excellence in Genomic Science (CEGS)
            initiative (http://cegs.stanford.edu).  The clone was isolated from
            the BAC library CHORI-211 (http://bacpac.chori.org).

            Quality: Phrap Quality >=40 100% of Sequence;
            Estimated Total Number of Errors is 0.

            -------------- Summary Statistics
```

Center project name: H_NH0719L21

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-563E2, 2000 bp overlap. Actual start of this clone is at base position 144522 of RP11-563E2; actual end is at base position 142462 of RP11-719L21.

  TITLE     Direct Submission
  JOURNAL   Submitted (21-MAR-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     -------------- Genome Center
              Center: Baylor College of Medicine
              Center code: BCM
              Web site: http://www.hgsc.bcm.tmc.edu/
              Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
              Center project name: GRBY
              Center clone name: CH230-270C13
            -------------- Summary Statistics
              Sequencing vector: Plasmid;
              Chemistry: Dye-terminator Big Dye: 100% of reads
              Assembly program: Phrap; version 0.990329
              Consensus quality: 126970 bases at least Q40
              Consensus quality: 134664 bases at least Q30
              Consensus quality: 140158 bases at least Q20
              Estimated insert size: 126396; sum-of-contigs estimation
              Quality coverage: 2x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 61 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     1002: contig of 1002 bp in length
            *    1003     1102: gap of unknown length
            *    1103     2104: contig of 1002 bp in length
            *    2105     2204: gap of unknown length
            *    2205     3741: contig of 1537 bp in length
            *    3742     3841: gap of unknown length
            *    3842     5455: contig of 1614 bp in length
            *    5456     5555: gap of unknown length
            *    5556     7319: contig of 1764 bp in length

            California Avenue, Palo Alto, CA 94304, USA
COMMENT     On May 5, 2004 this sequence version replaced gi:34013550.
            The sequence of the clone was established as a mapping and
            sequencing collaboration at the Stanford Genome Evolution Center,
            funded by the NIH Centers of Excellence in Genomic Science (CEGS)
            initiative (http://cegs.stanford.edu). The clone was isolated from
            the BAC library CHORI-211 (http://bacpac.chori.org).

            Quality: Phrap Quality >=40 100% of Sequence;
            Estimated Total Number of Errors is 0.6.

            -------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU). For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml CH211-81C11
            is from a CHORI-211 BAC library
            VECTOR: pTARBAC2.1.

  TITLE     Direct Submission
  JOURNAL   Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 15, 2002 this sequence version replaced gi:23908401.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: KCCJ
                Center clone name: CH230-490C22
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 169128 bases at least Q40
                Consensus quality: 170817 bases at least Q30
                Consensus quality: 171921 bases at least Q20
                Estimated insert size: 173670; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *         1   202314: contig of 202314 bp in length.
